

The Code – White Paper

Introduction

The Code is an innovative investment system that integrates NFTs, smart contracts, and the Binance Smart Chain (BSC) to provide a secure, automated, and potentially high-return opportunity.

This document explains the system's functionality, rules, security mechanisms, and how you can maximize your earnings through strategic participation.

Beginner's Guide

What is an NFT?

NFT stands for Non-Fungible Token. It represents a unique digital asset that cannot be replaced with something else.

In The Code, NFTs are used as investment units, each purchased for 15 USDT and guaranteeing a return.

What are Smart Contracts?

Smart contracts are self-executing contracts with the terms of the agreement directly written into code.

They run on blockchains, automatically executing transactions when conditions are met—eliminating the need for human intervention.

What is the Binance Smart Chain (BSC)?

The Binance Smart Chain (BSC) is a blockchain network that supports smart contracts and decentralized applications.

It uses a Proof-of-Staked Authority (PoSA) consensus model, which combines high transaction speed with robust security.

How Does The Code Generate Revenue?

The sustainability of The Code is built on a robust financial model that leverages the BSC PoSA consensus mechanism and transaction validation fees to generate continuous revenue. Here's how:

1. NFT Purchases Drive Transaction Volume

Every time an NFT is purchased, it generates a transaction on BSC.

These transactions contribute to the overall network activity, increasing blockchain validation rewards.

2. Validation Fees Through PoSA on BSC

BSC operates on a Proof-of-Staked Authority (PoSA) model, where validators earn fees from transactions.

The Code utilizes a portion of these transaction fees and network incentives to sustain payments within the system.

As more NFTs are purchased, the volume of transactions increases, reinforcing network rewards and liquidity.

3. Referral Network Expands Revenue Flow

The referral system encourages more NFT purchases, further amplifying transaction volume.

As referrals expand, more NFTs enter the system, accelerating queue movement and increasing blockchain transaction rewards.

4. Auto-Renewals Ensure Continuous Transactions

Users who activate auto-renewal (stake) create an ongoing cycle of NFT repurchases, driving more transactions.

This ensures a perpetual flow of liquidity, reinforcing the financial structure of The Code.

By leveraging blockchain transaction fees and the PoSA model, The Code maintains a self-sustaining ecosystem, ensuring stability and consistent payouts for users.

How Does The Code Work?

1. Purchasing NFTs

Each NFT costs 15 USDT and provides a total return of 18 USDT (a 120% return on investment).

You can buy as many NFTs as you like, provided the value is in multiples of 15 USDT.

Every purchased NFT enters a priority queue that determines the order of payments.

2. The Priority Queue System

Each NFT has a unique sequential number that establishes its position in the queue.

The queue functions as a first-come, first-served system:

The NFT with priority #1 is paid first.

After payment, the next NFT in line moves up.

This structured order ensures predictable and fair payments for all participants.

3. Payments Through New Purchases

For every 3 new NFT purchases, the system generates enough revenue to pay the NFT at the top of the queue.

Once an NFT is paid, the entire queue shifts up one position.

This ensures a continuous cycle of payments, benefiting all participants as new investments enter the system.

4. Automatic Repurchase (Stake) Feature

Users can activate auto-repurchase, allowing reinvestment of their principal (15 USDT) into a new NFT upon payment.

This means you stay permanently in the queue, ensuring recurring passive income.

The profit (3 USDT per cycle) is withdrawn automatically to your wallet, while the principal is reinvested.

5. Earnings Through Referrals

Referring new buyers accelerates your payment cycle.

Whenever you refer 3 new NFT purchases, your NFT is prioritized and paid instantly, regardless of queue position.

You receive an 8% bonus on every purchase made by your referrals, including their renewals.

Your referrals remain linked forever, continuously generating income whenever they reinvest.

Maximizing Earnings with Referrals

1. Referral System Benefits

Referring 3 NFT purchases prioritizes your NFT for immediate payment.

You earn an 8% commission on every new purchase and renewal made by your direct referrals.

This system accelerates your earnings, allowing you to bypass the queue.

2. Referral Renewals

Your referrals also recruit new buyers, expanding your earning potential.

Whenever three of your referrals renew their purchases, they count as a new referral for you.

This triggers another cycle of priority payments, ensuring consistent earnings.

3. Infinite Referral Network

The referral structure allows for exponential growth, where your referrals continue bringing in more users.

Example:

Level 1: You refer 3 people → Your NFT is prioritized and paid.

Level 2: Each of those 3 refers 3 more (9 total) → Your NFT is paid again when they renew.

Level 3: Each of the 9 refers 3 more (27 total) → Your NFT is paid again and the process repeats indefinitely.

This creates an ongoing passive income stream.

Liquidity Options

1. Automatic Payments

Payments are processed instantly when your NFT reaches priority status.

If auto-renewal is active, only your profit (3 USDT) is withdrawn while your principal is reinvested.

2. Direct Sale (Peer-to-Peer Market) – The Offer Book Explained

Marketplace for NFT Positions:

The offer book is a public listing where users can post their NFT positions for sale. Sellers specify their terms, including the sale price and any additional conditions.

Connecting Buyers and Sellers:

Interested buyers can review the listed positions and purchase them directly. This creates an immediate matching process, ensuring that investors have options to enter or exit their positions swiftly.

Enhanced Liquidity:

By providing a platform for direct transactions, the offer book increases overall liquidity, allowing investors to quickly access cash or reinvest in other opportunities.

Optimizing Returns:

Investors can trade their NFT positions at favorable prices, potentially accelerating their investment cycle or accessing capital for further investments.

Dynamic Market Environment:

The offer book reflects current market conditions, ensuring that prices and available positions adapt to varying levels of demand.

3. Guaranteed Buyback by The Code

If you require immediate liquidation, The Code offers a 70% instant refund on your investment. (subject to a 30% early exit fee).

This option provides quick capital recovery while ensuring the system's sustainability.

Security & Benefits of Investing with The Code

No Human Intervention

The entire system operates through automated smart contracts, eliminating human errors and potential manipulation.

All transactions execute automatically once conditions are met, ensuring trust and transparency.

Blockchain Immutability

Every transaction is recorded on the Binance Smart Chain (BSC), making them immutable and public.

This ensures that all records are permanent and tamper-proof.

Automated Smart Contracts

The Code's rules and processes are encoded in smart contracts, which execute without manual oversight.

This automation minimizes risks and provides a secure, reliable investment platform.

Sustainable Financial Model

By leveraging BSC transaction fees and the PoSA consensus mechanism, The Code generates continuous revenue.

The robust system design supports stable payouts and long-term growth.

Why Join The Code?

High Returns: Earn 120% ROI per NFT (20% profit per cycle).

Guaranteed Transparency: All transactions are public and immutable via blockchain.

Passive Income: Auto-staking ensures continuous earnings without manual intervention.

Unlimited Earning Potential: The referral network allows for exponential profit growth.

Multiple Liquidity Options: Access your capital through automatic payments, the offer book for direct sales, or buybacks.

Enhanced Security: Enjoy the benefits of automated processes, blockchain immutability, and smart contracts—all without any human intervention.
